Number Puzzle Trick
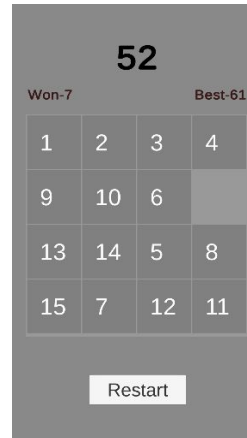

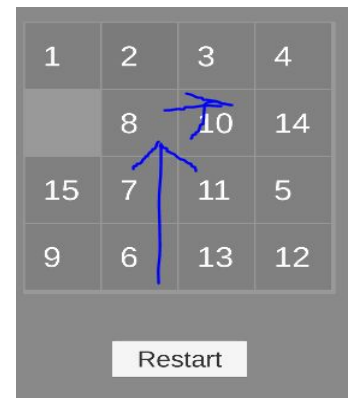

1. To solve such a puzzle, there is a trick. Like we want to solve from the ascending order

(1,2,3,4…). First of all we sort it like 4,3,2,1. The number 4 will be the top because 4 is the last number of the first row.

2. Same rule upto last row. Eventually it might appear in 2 format except 13,14,15
   14,15,13
   15,13,14
3. In that case, we have to move all 13 numbers to the left corner like below.

Then interchange their position to get accurate format.
